Regulatory Compliance Statements
This section provides the FCC compliance statement for Class A devices and describes how to keep the system CE compliant.

Declaration of Conformity

FCC
This equipment has been tested and verified to comply with the limits for a Class A digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area (domestic environment) is likely to cause harmful interference, in which case the user will be required to correct the interference (take adequate measures) at their own expense.

CE
The product(s) described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.
RoHS Compliance

NEXCOM RoHS Environmental Policy and Status Update
NEXCOM is a global citizen for building the digital infrastructure. We are committed to providing green products and services, which are compliant with European Union RoHS (Restriction on Use of Hazardous Substance in Electronic Equipment) directive 2011/65/EU, to be your trusted green partner and to protect our environment.

RoHS restricts the use of Lead (Pb) < 0.1% or 1,000ppm, Mercury (Hg) < 0.1% or 1,000ppm, Cadmium (Cd) < 0.01% or 100ppm, Hexavalent Chromium (Cr6+) < 0.1% or 1,000ppm, Polybrominated biphenyls (PBB) < 0.1% or 1,000ppm, and Polybrominated diphenyl Ethers (PBDE) < 0.1% or 1,000ppm.

In order to meet the RoHS compliant directives, NEXCOM has established an engineering and manufacturing task force to implement the introduction of green products. The task force will ensure that we follow the standard NEXCOM development procedure and that all the new RoHS components and new manufacturing processes maintain the highest industry quality levels for which NEXCOM are renowned.

The model selection criteria will be based on market demand. Vendors and suppliers will ensure that all designed components will be RoHS compliant.

How to recognize NEXCOM RoHS Products?
For existing products where there are non-RoHS and RoHS versions, the suffix “(LF)” will be added to the compliant product name.

All new product models launched after January 2013 will be RoHS compliant. They will use the usual NEXCOM naming convention.
Warranty and RMA

NEXCOM Warranty Period
NEXCOM manufactures products that are new or equivalent to new in accordance with industry standard. NEXCOM warrants that products will be free from defect in material and workmanship for 2 years, beginning on the date of invoice by NEXCOM. HCP series products (Blade Server) which are manufactured by NEXCOM are covered by a three year warranty period.

NEXCOM Return Merchandise Authorization (RMA)
- Customers shall enclose the “NEXCOM RMA Service Form” with the returned packages.
- Customers must collect all the information about the problems encountered and note anything abnormal or; print out any on-screen messages, and describe the problems on the “NEXCOM RMA Service Form” for the RMA number apply process.
- Customers can send back the faulty products with or without accessories (manuals, cable, etc.) and any components from the card, such as CPU and RAM. If the components were suspected as part of the problems, please note clearly which components are included. Otherwise, NEXCOM is not responsible for the devices/parts.
- Customers are responsible for the safe packaging of defective products, making sure it is durable enough to be resistant against further damage and deterioration during transportation. In case of damages occurred during transportation, the repair is treated as “Out of Warranty.”
- Any products returned by NEXCOM to other locations besides the customers’ site will bear an extra charge and will be billed to the customer.

Repair Service Charges for Out-of-Warranty Products
NEXCOM will charge for out-of-warranty products in two categories, one is basic diagnostic fee and another is component (product) fee.

System Level
- Component fee: NEXCOM will only charge for main components such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistor, capacitor.
- Items will be replaced with NEXCOM products if the original one cannot be repaired. Ex: motherboard, power supply, etc.
- Replace with 3rd party products if needed.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.

Board Level
- Component fee: NEXCOM will only charge for main components, such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistors, capacitors.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.
Warnings
Read and adhere to all warnings, cautions, and notices in this guide and the documentation supplied with the chassis, power supply, and accessory modules. If the instructions for the chassis and power supply are inconsistent with these instructions or the instructions for accessory modules, contact the supplier to find out how you can ensure that your computer meets safety and regulatory requirements.

Cautions
Electrostatic discharge (ESD) can damage system components. Do the described procedures only at an ESD workstation. If no such station is available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.
Safety Information

Before installing and using the device, note the following precautions:

- Read all instructions carefully.
- Do not place the unit on an unstable surface, cart, or stand.
- Follow all warnings and cautions in this manual.
- When replacing parts, ensure that your service technician uses parts specified by the manufacturer.
- Avoid using the system near water, in direct sunlight, or near a heating device.
- The load of the system unit does not solely rely for support from the rackmounts located on the sides. Firm support from the bottom is highly necessary in order to provide balance stability.
- The computer is provided with a battery-powered real-time clock circuit. There is a danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Installation Recommendations

Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.

Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:

- A Philips screwdriver
- A flat-tipped screwdriver
- A grounding strap
- An anti-static pad

Using your fingers can disconnect most of the connections. It is recommended that you do not use needle-nose pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.
Safety Precautions

1. Read these safety instructions carefully.

3. Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.

4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.

5. Keep this equipment away from humidity.

6. Put this equipment on a stable surface during installation. Dropping it or letting it fall may cause damage.

7. The openings on the enclosure are for air convection to protect the equipment from overheating. DO NOT COVER THE OPENINGS.

8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.

9. Place the power cord in a way so that people will not step on it. Do not place anything on top of the power cord. Use a power cord that has been approved for use with the product and that it matches the voltage and current marked on the product's electrical range label. The voltage and current rating of the cord must be greater than the voltage and current rating marked on the product.

10. All cautions and warnings on the equipment should be noted.

11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.

12. Never pour any liquid into an opening. This may cause fire or electrical shock.

13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.

14. If one of the following situations arises, get the equipment checked by service personnel:
   a. The power cord or plug is damaged.
   b. Liquid has penetrated into the equipment.
   c. The equipment has been exposed to moisture.
   d. The equipment does not work well, or you cannot get it to work according to the user’s manual.
   e. The equipment has been dropped and damaged.
   f. The equipment has obvious signs of breakage.

15. Do not place heavy objects on the equipment.

16. The unit uses a three-wire ground cable which is equipped with a third pin to ground the unit and prevent electric shock. Do not defeat the purpose of this pin. If your outlet does not support this kind of plug, contact your electrician to replace your obsolete outlet.

17. CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER. DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER’S INSTRUCTIONS.
Technical Support and Assistance

1. For the most updated information of NEXCOM products, visit NEXCOM’s website at www.nexcom.com.

2. For technical issues that require contacting our technical support team or sales representative, please have the following information ready before calling:
   – Product name and serial number
   – Detailed information of the peripheral devices
   – Detailed information of the installed software (operating system, version, application software, etc.)
   – A complete description of the problem
   – The exact wordings of the error messages

Warning!
1. Handling the unit: carry the unit with both hands and handle it with care.

2. Maintenance: to keep the unit clean, use only approved cleaning products or clean with a dry cloth.

Conventions Used in this Manual

Warning:
Information about certain situations, which if not observed, can cause personal injury. This will prevent injury to yourself when performing a task.

Caution:
Information to avoid damaging components or losing data.

Note:
Provides additional information to complete a task easily.

HDD Bracket Kit
Ordering Information

The following below provides ordering information for NDiS B426.

**Barebone**

NDiS B426 (P/N: 10W0OB42600X0)
Intel® Celeron® Processor 3855U with Nvidia GT 730M GPU

**Optional**

**VESA Mount Kit (P/N: 10W00B42601X0)**
- 1 x VESA Mount Bracket
- 10 x Screws

**Wall Mount Kit (P/N: 10W00B42602X0)**
- 2 x Wall Mount Bracket
- 4 x Screws
CHAPTER 1: PRODUCT INTRODUCTION

NDiS B426

Overview

Powered by new generation Intel® Celeron® Processor 3855U and NVIDIA® GeForce® GT 730M, NDiS B426 digital signage player can handle 4K2K multimedia contents. With Intel® processor low power consumption feature, NDiS B426 supports display output by dual HDMI ports. NDiS B426 is ideal as middle level digital signage player for advertising, hospitality and brand promotion application.

Key Features

- 6th generation Intel® Celeron™ 3855U processor
- Discrete GPU NVIDIA® GeForce® GT 730
- Dual HDMI output (4K2K resolution support)
- Compact and slim design (H: 29mm)
Chapter 1: Product Introduction

Hardware Specifications

**CPU Support**
- Intel® Celeron® Processor 3855U Dual Core 1.6GHz SoC

**Graphics**
- Intel® HD Graphics 510
- NVIDIA® GeForce® GT 730 GPU

**Main Memory**
- 1x 260-pin SO-DIMM socket, supports DDR4 1866/2133 MHz non-ECC, un-buffered memory up to 8G

**I/O Interface-Rear**
- 2x USB 2.0
- 2x USB 3.0
- 2x Antenna holes for Wi-Fi or TV tuner

**I/O Interface-Front**
- 19V DC-in
- 2x HDMI Ports
- 2x USB 3.0
- 1x RJ45 with LEDs 10/100/1000Mbps Ethernet
- 1x Power Switch with LED
- 1x DB9 for RS-232
- 1x Line-out
- 1x Mic-in

**Storage**
- 1x 2.5” SATA HDD/SSD Bay

**Expansion**
- 1x NGFF (M.2) E key for optional WLAN module

**Dimensions**
- 269mm (W) x 147.4mm (D) x 29mm (H), w/o mounting brackets

**Construction**
- Top cover made by aluminum for main heat exchange

**Power Supply**
- 1x External 63W AC/DC power adapter
  - Input: 100VAC to 240VAC
  - Output: DC+19VDC

**Environment**
- Operating temperature: -20°C to +50°C
- Storage temperature: -25°C to +80°C
- Humidity: 10 to 90% (non-condensing)

**Certification**
- CE approval
- FCC Class A

**Operating System**
- WES7/WE8S/Windows 10/Linux
Knowing Your NDiS B426

Front Panel

Power Switch Button (LED)
Power on/off switch with HDD operation status LED.

HDMI Ports
Used to connect an HDMI interface monitor.

USB 3.0 Ports
Used to connect USB 3.0/2.0/1.1 devices.

LAN
Used to connect the system to a local area network.

19V DC Input
Used to plug a DC power cord.

Line-out
Used to connect a headphone or a speaker.

Mic-in
Used to connect an external microphone.

COM Port
The COM port supports RS232 compatible serial devices.
Rear Panel

**USB 2.0 Ports**
Used to connect USB 2.0/1.1 devices.

**USB 3.0 Ports**
Used to connect USB 3.0/2.0/1.1 devices.

**Antenna Holes for Optional Wi-Fi**
The external antenna mounting holes are used to mount and connect optional Wi-Fi antennas.
Chapter 1: Product Introduction

Mechanical Dimensions

[Diagram showing mechanical dimensions]
CHAPTER 2: JUMPERS AND CONNECTORS

This chapter lists the locations of the jumpers and connectors for NDiS B426.

Before You Begin

- Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.

- Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:
  - A Philips screwdriver
  - A flat-tipped screwdriver
  - A set of jewelers screwdrivers
  - A grounding strap
  - An anti-static pad

- Using your fingers can disconnect most of the connections. It is recommended that you do not use needle-nosed pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.

- Before working on internal components, make sure that the power is off. Ground yourself before touching any internal components, by touching a metal object. Static electricity can damage many of the electronic components. Humid environments tend to have less static electricity than dry environments. A grounding strap is warranted whenever danger of static electricity exists.

Precautions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous.

Follow the guidelines below to avoid damage to your computer or yourself:

- Always disconnect the unit from the power outlet whenever you are working inside the case.

- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal chassis of the unit case, or the bare metal body of any other grounded appliance.

- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Don’t flex or stress the circuit board.

- Leave all components inside the static-proof packaging that they shipped with until they are ready for installation.

- Use correct screws and do not over tighten screws.
Jumper Settings

A jumper is the simplest kind of electric switch. It consists of two metal pins and a cap. When setting the jumpers, ensure that the jumper caps are placed on the correct pins. When the jumper cap is placed on both pins, the jumper is short. If you remove the jumper cap, or place the jumper cap on just one pin, the jumper is open.

Refer to the illustrations below for examples of what the 2-pin and 3-pin jumpers look like when they are short (on) and open (off).

Two-Pin Jumpers: Open (Left) and Short (Right)

Three-Pin Jumpers: Pins 1 and 2 are Short

CHAPTER 3: SYSTEM SETUP

Installing a SATA HDD

Prior to removing the chassis cover, make sure the unit's power is off and disconnected from the power sources to prevent electric shock or system damage.

1. Remove the mounting screws around the chassis cover and then remove the cover.
2. Align the mounting holes that are on the sides of the SATA drive with the mounting holes on the drive bay and then use the provided mounting screws to secure the drive in place.

3. Place the SATA drive in the chassis and connect the SATA data connector, then use screws to secure the drive in the chassis.
Installing a SO-DIMM Memory Module

1. Insert the module into the socket at an approximately 30 degrees angle. Apply firm even pressure to each end of the module until it slips into the socket. The gold-plated connector on the edge of the module will almost completely disappear inside the socket.

2. Push the module down until the clips on both sides of the socket lock into position. You will hear a distinctive “click” sound, indicating the module is correctly locked into position.
Chapter 3: System Setup

Installing a NGFF M.2 Wi-Fi Module (Optional)

1. The NGFF M.2 Wi-Fi module package includes the following items.

   - NGFF M.2 Wi-Fi Module
   - Antennas
   - RF Cables

2. Remove the cover on the bottom of the chassis to locate the NGFF M.2 slot.
3. Insert the NGFF M.2 Wi-Fi module into the NGFF M.2 slot at a 45 degrees angle until the gold-plated connector on the edge of the module completely disappears inside the slot.

4. Secure the module with mounting screws and attach one end of the RF cables onto the module.
5. Insert the antenna jack end of the cable through the antenna hole.

6. Insert ring 1 and ring 2 onto the antenna jack end of the cable.
Installing the Wall Mount Brackets

1. Align the mounting holes on the wall mount brackets to the mounting holes on both sides of the system, then secure the brackets with screws.

2. With the wall mount brackets secured, place the system to the desired installation location and mount the system by fastening screws through the mounting holes on the brackets.
Installing the VESA Mount Kit

1. Align the mounting holes on the VESA mount kit to the VESA mounting holes on the back of the monitor, then secure the VESA mount kit with screws.

2. Secure the system to the VESA mount bracket with screws.
CHAPTER 4: BIOS SETUP

This chapter describes how to use the BIOS setup program for the NDiS B426. The BIOS screens provided in this chapter are for reference only and may change if the BIOS is updated in the future.

To check for the latest updates and revisions, visit the NEXCOM website at www.nexcom.com.tw.

About BIOS Setup

The BIOS (Basic Input and Output System) Setup program is a menu driven utility that enables you to make changes to the system configuration and tailor your system to suit your individual work needs. It is a ROM-based configuration utility that displays the system’s configuration status and provides you with a tool to set system parameters.

These parameters are stored in non-volatile battery-backed-up CMOS RAM that saves this information even when the power is turned off. When the system is turned back on, the system is configured with the values found in CMOS.

With easy-to-use pull down menus, you can configure such items as:
- Hard drives, diskette drives, and peripherals
- Video display type and display options
- Password protection from unauthorized use
- Power management features

The settings made in the setup program affect how the computer performs. It is important, therefore, first to try to understand all the setup options, and second, to make settings appropriate for the way you use the computer.

When to Configure the BIOS

- This program should be executed under the following conditions:
- When changing the system configuration
- When a configuration error is detected by the system and you are prompted to make changes to the setup program
- When resetting the system clock
- When redefining the communication ports to prevent any conflicts
- When making changes to the Power Management configuration
- When changing the password or making other changes to the security setup

Normally, CMOS setup is needed when the system hardware is not consistent with the information contained in the CMOS RAM, whenever the CMOS RAM has lost power, or the system features need to be changed.
Default Configuration

Most of the configuration settings are either predefined according to the Load Optimal Defaults settings which are stored in the BIOS or are automatically detected and configured without requiring any actions. There are a few settings that you may need to change depending on your system configuration.

Entering Setup

When the system is powered on, the BIOS will enter the Power-On Self Test (POST) routines. These routines perform various diagnostic checks; if an error is encountered, the error will be reported in one of two different ways:

- If the error occurs before the display device is initialized, a series of beeps will be transmitted.
- If the error occurs after the display device is initialized, the screen will display the error message.

Powering on the computer and immediately pressing <Del> allows you to enter Setup.

Press the Del key to enter Setup:

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>← →</td>
<td>Moves the highlight left or right to select a menu.</td>
</tr>
<tr>
<td>↑ ↓</td>
<td>Moves the highlight up or down between sub-menus or fields.</td>

<td>Enter</td>
<td>Saves and exits the Setup program.</td>
</tr>
<tr>
<td></td>
<td>Press &lt;Enter&gt; to enter the highlighted sub-menu</td>
</tr>
</tbody>
</table>
Scroll Bar
When a scroll bar appears to the right of the setup screen, it indicates that there are more available fields not shown on the screen. Use the up and down arrow keys to scroll through all the available fields.

Submenu
When “▶” appears on the left of a particular field, it indicates that a submenu which contains additional options are available for that field. To display the submenu, move the highlight to that field and press Enter.
Chapter 4: BIOS Setup

BIOS Setup Utility

Once you enter the AMI BIOS Setup Utility, the Main Menu will appear on the screen. The main menu allows you to select from several setup functions and one exit. Use arrow keys to select among the items and press Enter to accept or enter the submenu.

Main
The Main menu is the first screen that you will see when you enter the BIOS Setup Utility.

System Date
The date format is <day>, <month>, <date>, <year>. Day displays a day, from Monday to Sunday. Month displays the month, from January to December. Date displays the date, from 1 to 31. Year displays the year, from 1999 to 2099.

System Time
The time format is <hour>, <minute>, <second>. The time is based on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00. Hour displays hours from 00 to 23. Minute displays minutes from 00 to 59. Second displays seconds from 00 to 59.

Halt On
Select the situation in which you want the BIOS to stop the POST process and notify you.
Advanced

The Advanced menu allows you to configure your system for basic operation. Some entries are defaults required by the system board, while others, if enabled, will improve the performance of your system or let you set some features according to your preference.

Setting incorrect field values may cause the system to malfunction.

CPU Configuration

This section is used to view CPU status and configure parameters.

### Virtualization Tech

When this field is set to Enabled, the VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

### EIST tech.

Enables or disables Intel® SpeedStep.

### Turbo Boost Tech

Use this item to enable or disable Intel Turbo Boost Mode Technology. Turbo Boost Mode allows processor cores to run faster than marked frequency in specific conditions.

### CPU C6 Report and CPU C7 Report

Enables or disables C6 report and C7 report to the operating system.
SATA Configuration
This section is used to configure storage devices.

<table>
<thead>
<tr>
<th>Option</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>SATA Controller</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>SATA Controller Mode</td>
<td>[AHCI Mode]</td>
</tr>
<tr>
<td>Serial Port 1</td>
<td>Not Present</td>
</tr>
</tbody>
</table>

**SATA Controller**
Enables or disables the SATA controller.

**SATA Mode Selection**
Configures the SATA as AHCI mode.

**AHCI**
This option configures the Serial ATA drives to use AHCI (Advanced Host Controller Interface). AHCI allows the storage driver to enable the advanced Serial ATA features which will increase storage performance.

---

USB Configuration
This section is used to configure USB parameters.

**USB Controller**
Enables or disables the USB controller.
Hardware Health Configuration
This section is used to monitor hardware status such as temperature, fan speed and voltages.

<table>
<thead>
<tr>
<th>Option</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU Fan Fail Warning</td>
<td>Disabled</td>
</tr>
<tr>
<td>CPU Q-FAN Control</td>
<td>Disabled</td>
</tr>
<tr>
<td>CPU Temperature</td>
<td>+35 C</td>
</tr>
<tr>
<td>Tcontrol Offset</td>
<td>+85 C</td>
</tr>
<tr>
<td>CPU Fan Speed</td>
<td>5113 RPM</td>
</tr>
<tr>
<td>VCore Voltage</td>
<td>+1.188 V</td>
</tr>
<tr>
<td>3.3V Voltage</td>
<td>+3.309 V</td>
</tr>
<tr>
<td>5V Voltage</td>
<td>+5.044 V</td>
</tr>
<tr>
<td>12V Voltage</td>
<td>+12.230 V</td>
</tr>
</tbody>
</table>

**Tcontrol Offset**
Displays the Tcontrol offset temperature.

**CPU Fan Speed**
Detects and displays the current CPU fan speed.

**VCore Voltage**
Detects and displays the Vcore CPU voltage.

**3.3V Voltage**
Detects and displays 3.3V voltage.

**5V Voltage**
Detects and displays 5V voltage.

**12V Voltage**
Detects and displays 12V voltage.

**CPU Fan Fail Warning**
Enables or disables detection of fan failure.

**CPU Q-FAN Control**
Enables or disables control of CPU fan speed.

**CPU Temperature**
Detects and displays the current CPU temperature.
Onboard Device Settings
This section is used to configure the onboard devices.

Onboard VGA Config
Configuration for onboard VGA devices.

Onboard Audio
Enables or disables onboard HD audio.

Onboard LAN Device
Enables or disables onboard LAN.

LAN Boot ROM
Enables or disables LAN legacy PXE boot.

Serial Port 1 Configuration
Enables or disables serial port 1.

Serial Port 2 Configuration
Enables or disables serial port 2.
Onboard VGA Config
This section is used to configure onboard VGA devices.

Pre-Allocated Memory Size
Selects the amount of system memory used by the internal graphics device.

DVMT Fixed Memory Size
Selects the graphics memory size used by the DVMT.

Trusted Computing
This section is used to configure Trusted Platform Module (TPM) settings.

TPM Supported
Enables or disables BIOS support for security device. O.S will not show security device. TCG EFI protocol and INT1A interface will not be available.
### ME Subsystem
This section is used to configure Intel® Management Engine (Intel® ME).

<table>
<thead>
<tr>
<th>Intel ME Subsystem Configuration</th>
<th>Enable / Disable ME</th>
</tr>
</thead>
<tbody>
<tr>
<td>ME Version</td>
<td>11.0.0.1197</td>
</tr>
<tr>
<td>ME Update</td>
<td>[Disabled]</td>
</tr>
</tbody>
</table>

**ME Update**
Enables or disables Intel ME.

### Power
This section is used to configure the power management features.

#### APM Configuration
Configuration for Advanced Power Management.

**EUP**
Enables the system to shut down to the lowest possible power state by removing all power to the system board. The wake up function will be lost if EUP is enabled.
Chapter 4: BIOS Setup

APM Configuration

Wake up on LAN
Enables or disable the system to wake up on LAN.

Power on RTC Alarm
Enables or disables the system to wake up on RTC alarm. When enabled, the system will wake on the hr::min::sec specified.

RTC Alarm Date, Hour, Minute and Second
Configures the date and time of the RTC alarm.

AC Power Loss

Power Off
When power returns after an AC power failure, the system’s power is off. You must press the power button to power-on the system.

Power On
When power returns after an AC power failure, the system will automatically power-on.

Last State
When power returns after an AC power failure, the system will return to the state where you left off before power failure occurs. If the system’s power is off when AC power failure occurs, it will remain off when power returns. If the system’s power is on when AC power failure occurs, the system will power-on when power returns.

Watchdog
Enables or disables the watchdog function.
### Security

**Password Description**

<table>
<thead>
<tr>
<th>Password Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supervisor Password</td>
<td>Not Installed</td>
</tr>
<tr>
<td>User Password</td>
<td>Not Installed</td>
</tr>
<tr>
<td>Administrator Password</td>
<td>Not Installed</td>
</tr>
</tbody>
</table>

**Set Administrator Password**

**Secure Boot**

Select this to enable or disable Secure Boot. Secure Boot only works when the system runs in user mode.

**Secure Boot Mode**

Select this to configure the Secure Boot mode.

- **Standard**
  - Fixed secure boot policy.
- **Custom**
  - Changeable Image Execution policy and Secure Boot key databases.

### Boot

**Boot Mode Select**

- **UEFI and Legacy**

**Launch CSM**

This option controls if CSM will be launched.

**Boot Option Filter**

Configures which devices the system will boot from.

**Network Drives**

Sets the order of the legacy devices in this group.
Chapter 4: BIOS Setup

Boot Settings Configuration

**Full Screen Logo**
Enables or disables full screen logo.

**Bootup Num-Lock**
This allows you to determine the default state of the numeric keypad. By default, the system boots up with NumLock on wherein the function of the numeric keypad is the number keys. When set to Off, the function of the numeric keypad is the arrow keys.

**Keyboard Error Message Display**
This item allows you to enable or disable the “Keyboard Error” message during bootup.

**Fast Boot**
When enabled, the BIOS will shorten or skip some check items during POST. This will decrease the time needed to boot the system.
Chapter 4: BIOS Setup

Boot Device Priority

Adjust the boot sequence of the system. Boot Option #1 is the first boot device that the system will boot from, next will be #2 and so forth.

Save & Exit

Save Changes and Exit
To save the changes and exit the Setup utility, select this field then press <Enter>. A dialog box will appear. Confirm by selecting Yes. You can also press <F4> to save and exit Setup.

Discard Changes and Exit
To exit the Setup utility without saving the changes, select this field then press <Enter>. You may be prompted to confirm again before exiting. You can also press <ESC> to exit without saving the changes.

Load Optimal Defaults
To restore the BIOS to default settings, select this field then press <Enter>. A dialog box will appear. Confirm by selecting Yes.
Appendix A: Watchdog

Watchdog Timer Control Register (Index=71h, Default=00h)

<table>
<thead>
<tr>
<th>Bit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>WDT is reset upon a CIR interrupt.</td>
</tr>
<tr>
<td>6</td>
<td>WDT is reset upon a KBC (Mouse) interrupt.</td>
</tr>
<tr>
<td>5</td>
<td>WDT is reset upon a KBC (Keyboard) interrupt.</td>
</tr>
<tr>
<td>4</td>
<td>WDT Output through RSTCONOUT (pulse) Enable</td>
</tr>
<tr>
<td></td>
<td>0: Enable</td>
</tr>
<tr>
<td></td>
<td>1: Disable</td>
</tr>
<tr>
<td>3</td>
<td>External CLK_IN Select</td>
</tr>
<tr>

<tr>
<td></td>
<td>1: WDT value is not equal to 0.</td>
</tr>
</tbody>
</table>

SMI# Control Register 2 (Index=F1h, Default=00h)

<table>
<thead>
<tr>
<th>Bit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>Reserved</td>
</tr>
<tr>
<td>6</td>
<td>0: Edge trigger</td>
</tr>
<tr>
<td></td>
<td>1: Level trigger</td>
</tr>
<tr>
<td>5-3</td>
<td>Reserved</td>
</tr>
<tr>
<td>2</td>
<td>This bit is to enable the generation of a SMI# due to WDT's IRQ (EN_WDT).</td>
</tr>
<tr>
<td>1</td>
<td>This bit is to enable the generation of a SMI# due to CIR's IRQ (EN_CIR).</td>
</tr>
<tr>
<td>0</td>
<td>This bit is to enable the generation of a SMI# due to PBD's IRQ (EN_PBD).</td>
</tr>
</tbody>
</table>

SMI# Status Register 2 (Index=F3h, Default=00h)

This register is used to read the status of SMI# inputs.

<table>
<thead>
<tr>
<th>Bit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7-6</td>
<td>Panel Button De-bounce Status 1-0</td>
</tr>
<tr>
<td></td>
<td>Writing 1 will reset the status.</td>
